New Module News

What's new at ESOHTN, you ask? In addition to your numerous awareness modules, our team is hard at work developing two brand new, in-depth, multi-course certification modules. Both of these training curriculums are designed to offer you the knowledge needed to pass a certification exam or even obtain Continuing Education Units (CEUs). Expected release date of the new trainings is late Q1 2016.

New courses in development:

Underground Storage Tank Operator A/B Certification:

This course will consist of 17 modules with information based on the requirements established by the EPA and state regulatory agencies for UST Operators A/B. To facilitate your learning experience, each course is being developed with state-specific information and state regulations integrated into each module. Topics covered include operator overview, tanks and piping, ancillary equipment, spill and overflow prevention, tank gauging, release detection, statistical inventory reconciliation, secondary containment and interstitial monitoring, groundwater and vapor monitoring, corrosion protection, emergency response, product compatibility, notification and registration requirements, release reporting, closure requirements, and financial responsibility.

Backflow Prevention:

This training will consist of approximately 18 hours of in-depth training with content based on ABC Need-to-Know criteria, AWWA-M14 manual, and USEPA Backflow Prevention manuals. Training will include terminology, types of backflow prevention devices and assemblies, how they protect human health, overall functionality, equipment, testing, pros and cons, basic hydraulics of backflow backsiphonage and backflow backpressure, troubleshooting failed devices, and roles of the EPA, states, local government, public water system, and others that require backflow prevention devices or assemblies.

Cross Connection Control:

This training will also consist of approximately 18 hours of in-depth training with content based on ABC Need-to-Know criteria, AWWA-M14 manual, and USEPA Cross Connection manuals. Training will include terminology, public health significance, laws, regulations and policies, types of cross connections and where they are found, pros and cons, theory of backflow, degrees of hazards, methods of protection, how to develop a cross connection control program plan, and roles of the public water systems, plumbing inspectors, plumbers, states, local government, and others to control cross connections.

Fall Support Tip

ESOHTN's Installation Specific Information page can be found on the ESOHTN home page above the image of our U.S. flag.

Here, you can find important documents, forms and policy statements that your base has submitted. If there are additional documents that would be of importance to you and your installation, you can send them to us to add at support@esohtn.com.

System Enhancements

Good news for all installations! We can now accept pre-made voice overs to add to your existing training modules.

If you would like to enhance your training experience and have a specific voice over segment in mind, you can send it directly to us for integration. Simply send one .mp3 file for each training page to our Customer Support team at support@esohtn.com.

We would be happy to help personalize your training for added user benefit!
